Surgical Procedures (regardless of place of service)

Preapproval is not a determination of eligibility or a guarantee of payment. Coverage and payment are contingent upon, among other things, the patient being eligible, i.e., actively enrolled in the health benefits plan when the preapproval is issued and when approved services are provided. Coverage and payment are also subject to limitations, exclusions, and other specific terms of the health benefits plan that apply to the coverage request.

In addition to the preapproval requirements listed above, you should contact AmeriHealth and provide prenotification for certain categories of treatment so you will know prior to administering treatment whether it is a covered service. The categories of treatment (in any setting) include:

- any surgical procedure that may be considered potentially cosmetic;
- any procedure, treatment, drug, or device that represents "new or emerging technology," including Infusion Therapy drugs newly approved by the FDA;
- services that might be considered experimental/investigative.

The above list of services requiring preapproval is subject to change. For questions about preapproval, please call Customer Service at 1-800-275-2583. You can also go to www.amerihhealth.com/providers/preapproval to learn more about preapproval requirements for all products.
