Clinical documentation and coding tips

Telehealth

Telehealth services occur when a patient uses technology to receive care remotely, either through real-time audio and/or video communication or non-real-time methods. The modality used must be documented for each date of service.

Synchronous visit

Interactive, real-time communications, which include telephone connection or a combination of telephone and video connection.

Asynchronous visit

- Often known as "store and forward."
- Electronic transmission of medical information to a practitioner who can evaluate outside of real-time or at a later date.

Each telehealth encounter must specify if using audio only or audio/visual within the chart for that date of service.

CPT®/HCPCS* Code	Modifier	FModifier Description
Various	95	Synchronous telemedicine service rendered via real-time interactive audio and video telecommunications system
99441-99443	93	Synchronous telemedicine service rendered via telephone or other real-time interactive audio-only telecommunications system
